Practical No.1

Aim:Creation of Test Suite Using Selenium IDE

Tool: Selenium IDE (Chrome/Firefox Extension) Install Selenium IDE and create a test suite containing a minimum of four test cases to validate different web page formats (HTML page, XML response, JSON API output, and a dynamic form page). Execute the suite and export the automation script in WebDriver format.

REQUIREMENTS:

1) Selenium IDE extension on a browser.
2) NetBeans IDE for creating test case files.

STEPS:

1. Open Google and search for **"Selenium IDE Chrome."**
2. Select the first search result and navigate to the **Selenium IDE** extension page.
3. Click **"Add to Chrome"** to install the extension in your browser.
4. For testing, we need a **test case suite**, so we create a **WebApplication** in **NetBeans IDE**. **File > New Project > Java Web > Web Application > Add GlassFish Server > Finish.**
5. In *index.html*, we **write the following code** for "ARITHMETIC OPERATIONS" test case suite:

---index.html---

```
<html>
  <head>
    <title>prac1</title>
    <script language="javascript">
      function addition()
        {
          var num1=parseInt(document.arithmetic.n1.value);
          var num2=parseInt(document.arithmetic.n2.value);
          var result=num1+num2;
          document.arithmetic.res.value=result;
        }

      function subtraction()
        {
          var num1=parseInt(document.arithmetic.n1.value);
          var num2=parseInt(document.arithmetic.n2.value);
          var result=num1-num2;
          document.arithmetic.res.value=result;
        }

      function multiplication()
```

```
        {
          var num1=parseInt(document.arithmetic.n1.value);
          var num2=parseInt(document.arithmetic.n2.value);
          var result=num1*num2;
          document.arithmetic.res.value=result;
        }

      function division()
        {
          var num1=parseInt(document.arithmetic.n1.value);
          var num2=parseInt(document.arithmetic.n2.value);
          var result=num1/num2;
          document.arithmetic.res.value=result;
        }
    </script>
  </head>

  <body>
    <h1 align="center"> Arithmetic Operations </h1>
    <form name="arithmetic">
      <table border="1" align="center">

        <tr>
          <td>Number 1: </td>
          <td><input type="text" name="n1" size="20"></td>
        </tr>

        <tr>
          <td>Number 2: </td>
          <td><input type="text" name="n2" size="20"></td>
        </tr>

        <tr>
          <td colspan=2>
            <input type="button" name="add" value="Add"
onclick="javascript:addition();"> 
            <input type="button" name="sub" value="Subtract"
onclick="javascript:subtraction();"> 
            <input type="button" name="mul" value="Multiply"
onclick="javascript:multiplication();"> 
            <input type="button" name="div"
value="Divide" onclick="javascript:division();"> 
          </td>
        </tr>

        <tr>
            <td colspan="2">Result is: <input type="text" name="res" size="20"
value=""></td>
```

```
            </tr>

        </table>
    </form>
  </body>
</html>
```

1) Create a **JSP file** *"newjsp.jsp"* with a link to the created HTML file.

---newjsp.jsp---

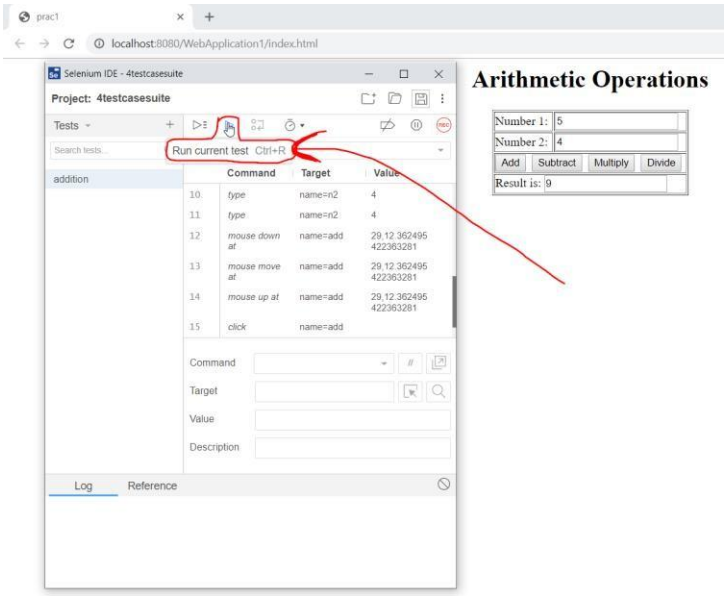

```
<%@page contentType="text/html" pageEncoding="UTF-8"%>
<!DOCTYPE html>
<html>
  <head>
    <meta http-equiv="Content-Type" content="text/html; charset=UTF-8">
    <title>JSP Page</title>
  </head>
  <body align="center">
    <h1>Test Cases IDE</h1>
    <a href="index.html">Arithmetic Operations</a>
  </body>
</html>
```

2) **Run** this JSP file from NetBeans. It will then open up in a browser.
   - Then from the browser, **open the link**:
   - Now you'll be redirected to ARITHMETIC OPERATIONS page.
     Copy the URL of the page and **open "Selenium IDE" extension**:
   - Now, **Record a new test project in a new project:**
   - **Name your project**:
   - **Paste that URL** here and click **Start Recording:**
   - A **new tab** will be opened, **maximize** that tab(this tab is your working tab for recording):

Click on **Stop Recording**:

- Just as you stop your recording, you'll be prompted to **Name your new test,** we'll make our new test as "**addition**":
- **Save the project** after each test case:
- A file with "**.SIDE**" extension will be saved(SIDE abbrev to **S**elenium **IDE**):
- Now, we'll **Start Recording** our first test case(addition):
- We'll be prompted to **paste our URL again**, then click **Start Recording**
- **NOTE THAT** each clicks are recorded:
- Now we'll **Stop Recording from the Selenium IDE:**

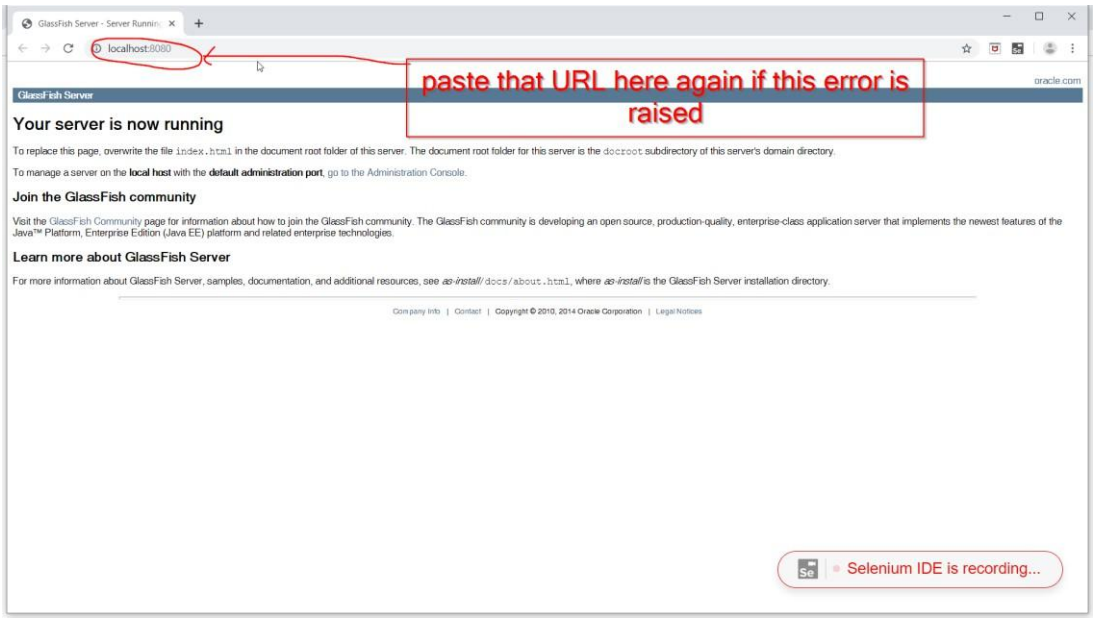

- We'll then **Run current**

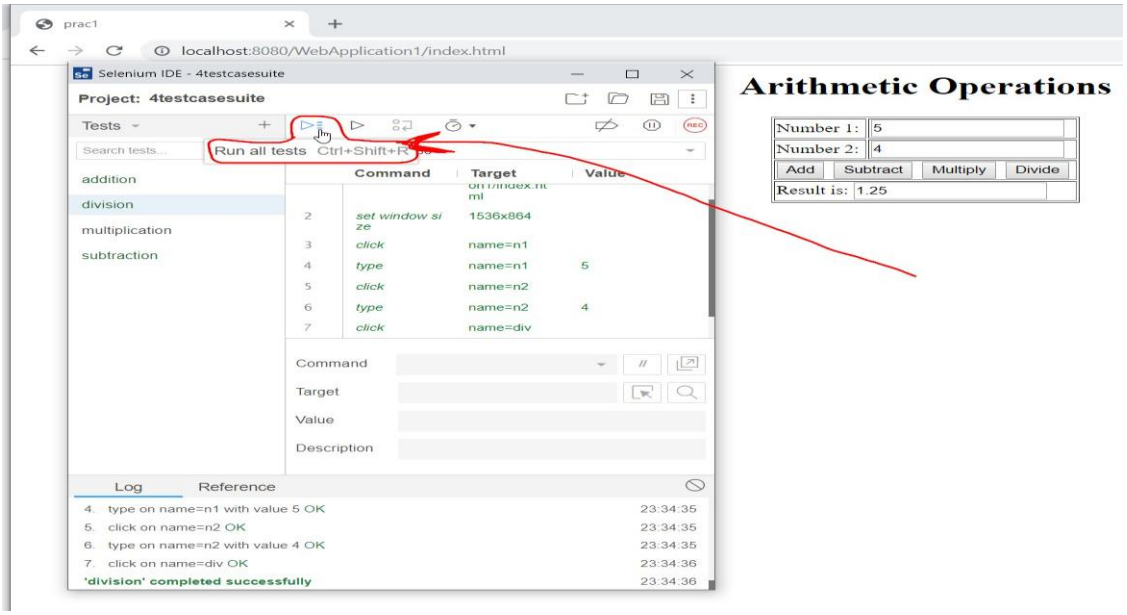

- **test**(addition):

- The **test will run automatically** and the **completion will be shown step-by-step** in the **"Log" area** in the Selenium IDE:
- **NOTE1: You can set the "Test execution speed" too:**

NOTE2: Paste here the URL again if the Glassfish Error occurs between any test case

- Now **create 3 more test cases**(subtraction, multiplication, division). Then "**Run all tests**":

1) **Finish!**
