Practical No: 04

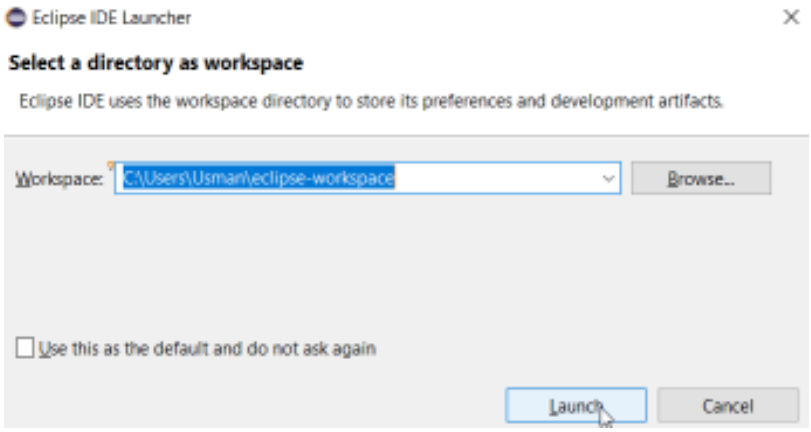

Aim:Login Automation and Validation Tool: Selenium WebDriver (Java/PHP) Write an automation script to perform login on a specified web page. Verify successful login using assertions such as URL validation, welcome message validation, and logout visibility check.

PRE-REQUISITES:

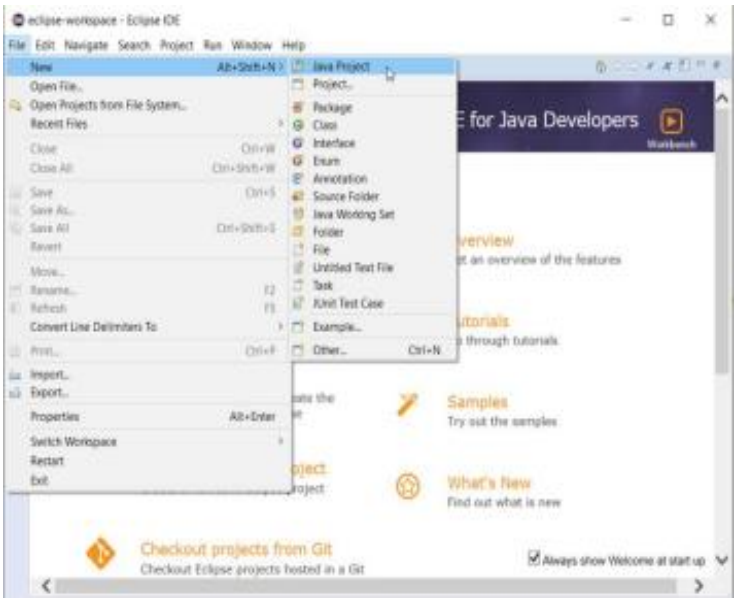

1) Check that you have **JDK**.
2) Check that you have **Eclipse IDE**.
3) Check that you have **Selenium *Server Driver* and *Client Driver*(JAR files)**.
4) Check that you have **Gecko Driver**.
5) Check that you have a stable Internet connection.

STEPS:

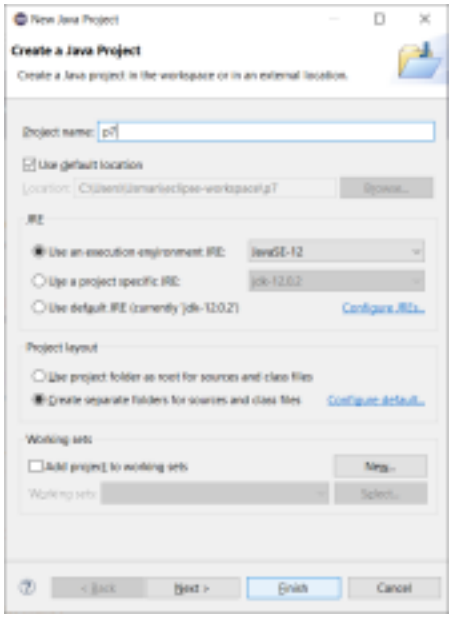

1) Open Eclipse. Select your workspace directory. Click **Launch:**

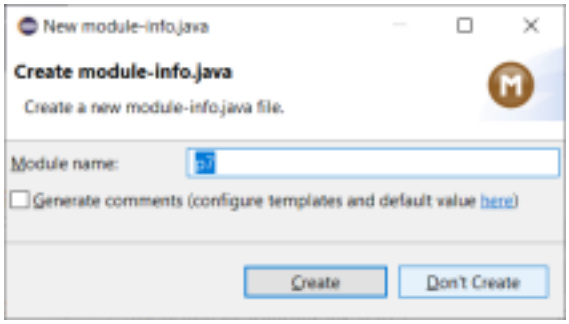

2) Create a Project(**File > New > Java Project**):

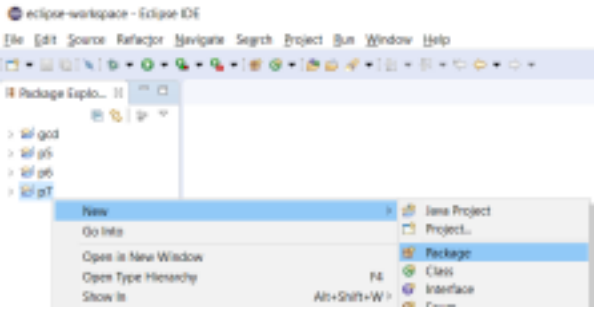

3) Name the project as "p7" **>** click **Finish >** click **Don't Create** module:

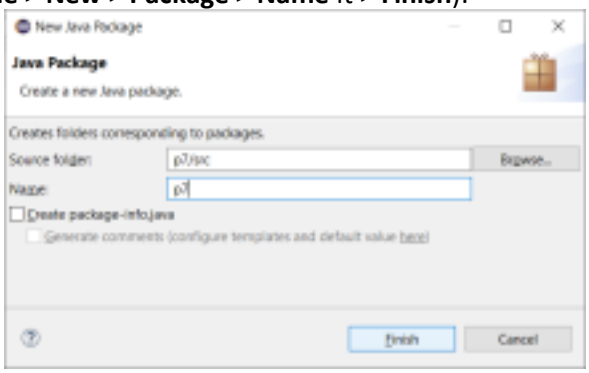

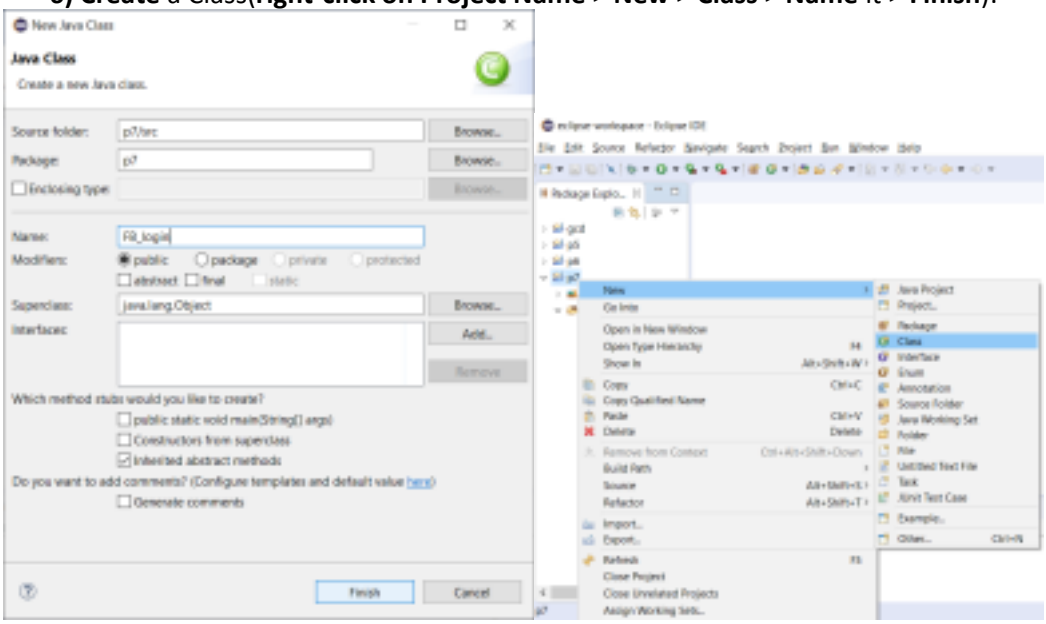

4) Close the "Welcome" tab.

5) Create a Package(**right-click on Project Name > New > Package > Name** it **> Finish**):

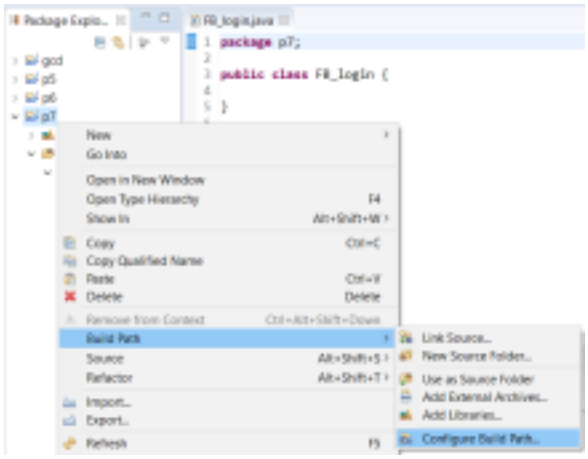

6) Create a Class(**right-click on Project Name > New > Class > Name** it **> Finish**):

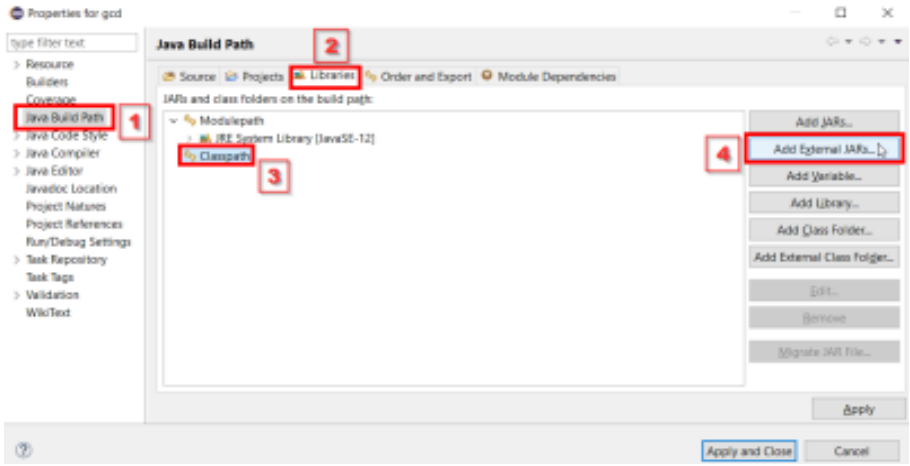

7) Adding **"Selenium *Server Driver* and *Client Driver*(JAR files)"** in Eclipse IDE**:**

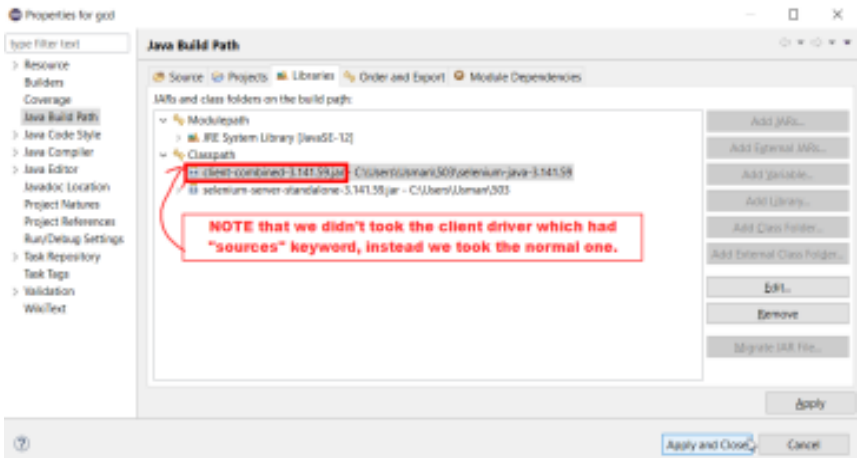

- **right-click on Project Name > Build Path > Configure Build Path…**

• now go under: **Java Build Path > Libraries > Classpath >** click **Add External JARs**

• Browse and **add JAR files >** click **Apply and Close :**

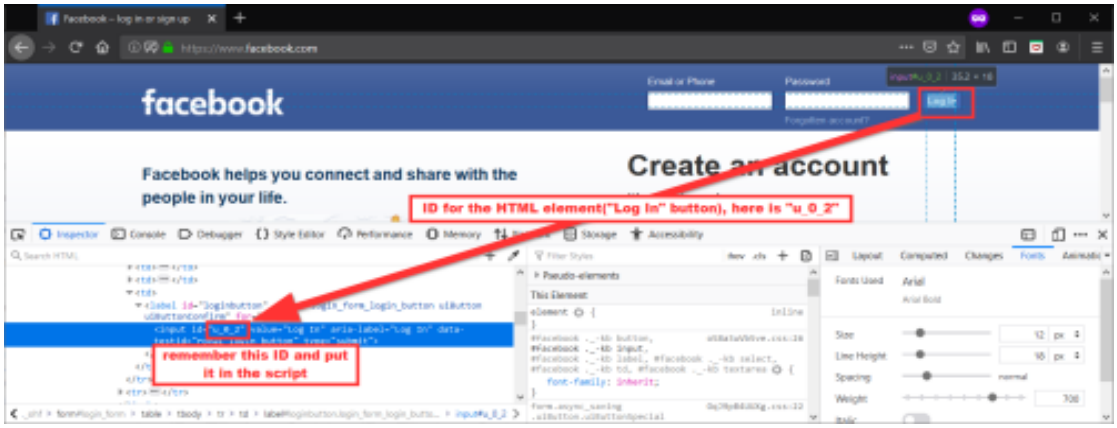

8) Fetching ID's of the HTML attributes of the elements from the facebook webpage.

For instance we looking for the ID behind "Log In" button HTML element

(right-click over element(button/textbox) **>** click **Inspect Element):**

(do the same for EMAIL TEXTBOX & PASSWORD TEXTBOX)

9) Creating the ***script*** *in JAVA*:

- Now we'll put the path of "geckodriver" in a String ***driverPath***
- And in here, we'll **put the ID's in the *.id()* method respectively**.

---(FB_login.java)---

```
package p7;

import org.openqa.selenium.By;
import org.openqa.selenium.Keys;
import org.openqa.selenium.WebDriver;
import org.openqa.selenium.WebElement;
import org.openqa.selenium.firefox.FirefoxDriver;
import org.openqa.selenium.firefox.*;
import org.openqa.selenium.firefox.FirefoxOptions;
import org.openqa.selenium.firefox.FirefoxProfile;
import org.openqa.selenium.firefox.internal.ProfilesIni;

public class FB_login {
	static String driverPath = "C:\\Users\\Usman\\503\\geckodriver.exe";

 public static void main(String[] args) {
 System.setProperty("webdriver.gecko.driver", driverPath);
 		//DesiredCapabilities capabilities = DesiredCapabilities.firefox();
 	//capabilities.setCapability("marionette",true);
 	ProfilesIni allProfiles = new ProfilesIni();
 	FirefoxProfile fp = new FirefoxProfile();
 	fp.setPreference(FirefoxProfile.PORT_PREFERENCE,"7055");
 	FirefoxOptions options = new FirefoxOptions();
 	options.setProfile(fp);

 	//objects and variables instantiation
 WebDriver driver = new FirefoxDriver(options);
 String appUrl = "https://www.facebook.com/";

 //launch the firefox browser and open the application url
driver.get(appUrl);

 //maximize the browser window
 driver.manage().window().maximize();

 //declare and initialize the variable to store the expected title of the  webpage.
 String expectedTitle = "Facebook – log in or sign up";

 //fetch the title of the web page and save it into a string variable  String
```

```
actualTitle = driver.getTitle();

 //compare the expected title of the page with the actual title of the page  and print
the result
 if (expectedTitle.equals(actualTitle)) {
 System.out.println("Verification Successful - The correct title is  displayed on
the web page.");
 }
 else {
 System.out.println("Verification Failed - An incorrect title is  displayed on
the web page.");
 }

 //enter a valid username in the email textbox
 WebElement username = driver.findElement(By.id("email"));
username.clear();
 username.sendKeys("your email id");

 //enter a valid password in the password textbox
 WebElement password = driver.findElement(By.id("pass"));
password.clear();
 password.sendKeys("your password");

 password.sendKeys(Keys.ENTER);

 //click on the Sign in button
 WebElement LogInButton = driver.findElement(By.id("u_0_2"));
LogInButton.click();

 //close the web browser
 driver.close();
 System.out.println("Test script executed successfully.");
 //terminate the program
 System.exit(0);
 }
}
```

10) Run the file from Eclipse IDE:

- **OUTPUT:**

11) Finish!
