Practical No: 06

Aim:Cross-Browser Testing Using Selenium Grid Tool: Selenium Grid Execute automation scripts across multiple browsers (Chrome, Firefox, Edge) using Selenium Grid. Compare execution time and compatibility issues.

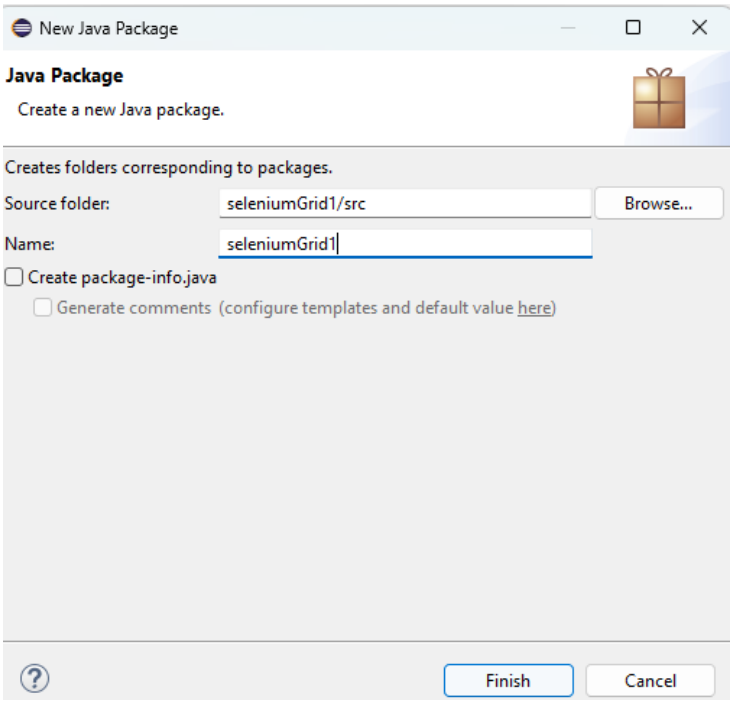

In Eclipse:**Create Selenium Project**

OPEN ECLIPS:FILE NEW JAVA PROJECT ADD PCKAGE CLASS FILE

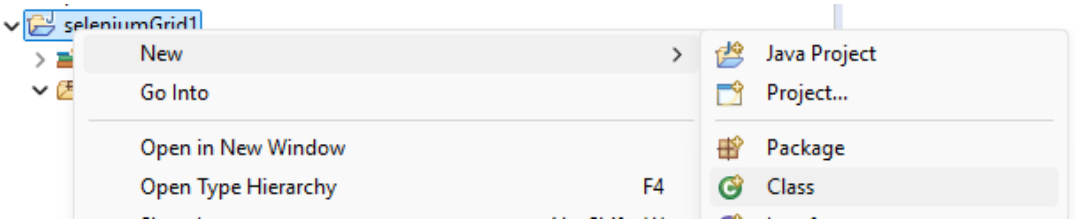

Make package

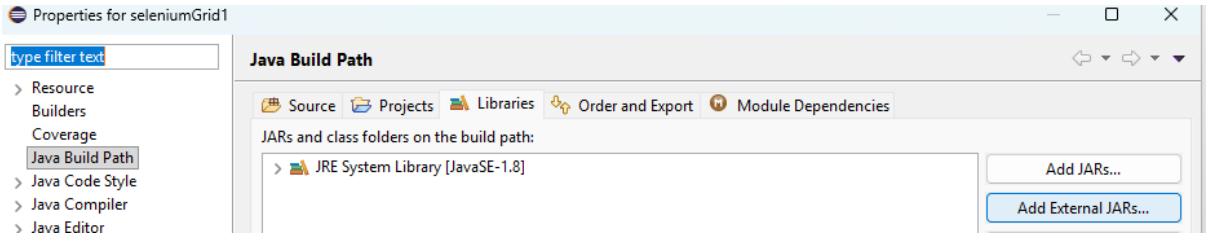

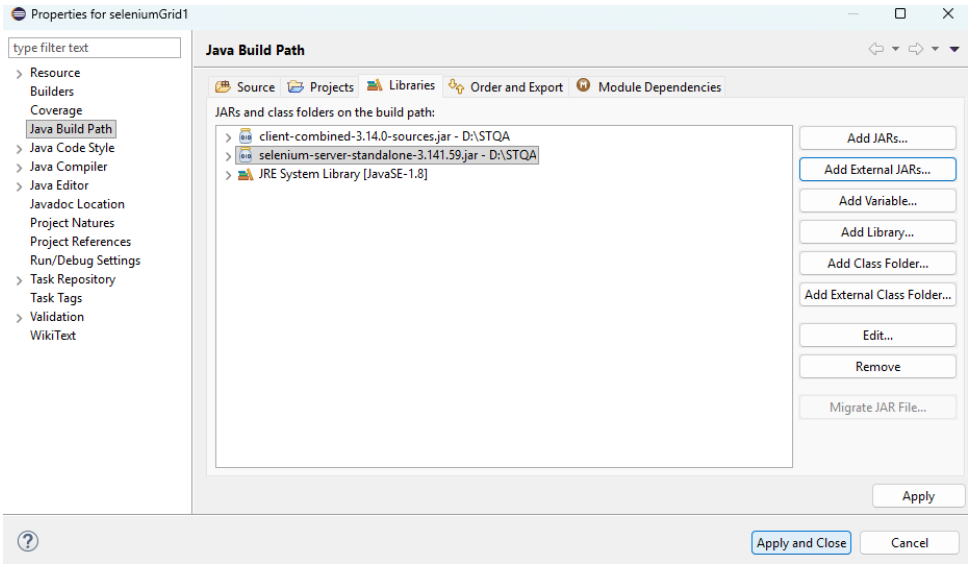

- **Make two classes**

- Add External Jars

```
package seleniumGrid1;

import java.net.URL;

import org.openqa.selenium.WebDriver;

import org.openqa.selenium.chrome.ChromeOptions;

import org.openqa.selenium.firefox.FirefoxOptions;
```

```
import org.openqa.selenium.edge.EdgeOptions;
import org.openqa.selenium.remote.RemoteWebDriver;

public class grid3 {
        public static void main(String[] args) throws Exception {

      String[] browsers = {"chrome", "firefox", "edge"};

      for (String browser : browsers) {

         WebDriver driver;

         if (browser.equals("chrome"))
            driver = new RemoteWebDriver(
               new URL("http://localhost:4444"),
               new ChromeOptions());

         else if (browser.equals("firefox"))
            driver = new RemoteWebDriver(
               new URL("http://localhost:4444"),
               new FirefoxOptions());

         else
            driver = new RemoteWebDriver(
               new URL("http://localhost:4444"),
               new EdgeOptions());

         long start = System.currentTimeMillis();

         driver.get("https://www.selenium.dev/");
```

```
            System.out.println(browser + " : " + driver.getTitle());

            long time = System.currentTimeMillis() - start;
            System.out.println("Time: " + time + " ms");

            driver.quit();
        }
    }
}
```
